Abstract

In the last recent years streaming services such as Netflix, Youtube, Amazon Prime Video, Hulu and others, have become the main source for video content delivery to the public. With the effort of private companies and of the AOM consortium, various coding formats and streaming techinques have been refined and have gain popularity. *Adaptive Bitrate Streaming*, between others, enables high quality streaming of media content over HTTP, and represents nowadays the industry's standard.

DASH *Dynamic Adaptive Streaming over HTTP* is an instance of Adaptive Bitrate Streaming originally developed by MPEG. In DASH each media file gets encoded at multiple bitrates, which are then partitioned into smaller segments and delivered to the user over HTTP. Netflix's use of DASH services is no mistery, indeed it is already five years that each title on Netflix sits with its own different bitrate copies on a CDN, waiting to be served to clients in a particular area of the planet. [1]

Despite a recent upgrade in Netflix infrastructure to provide HTTPS encryption of each video stream, research shows that the privacy of the end user is at risk, more precisely there exist techniques to identify the content the client is playing as Reed et Al. [2] have shown. They make use of adudump [**?**] a command live program that uses TCP sequence and ACKS to infer the sizes of application data unit *ADUs* transferred over each TCP connection. Our approach is mainly based on their work, with few differences highlighted in Section X.

Declaration of originality

The signed declaration of originality is a component of every semester paper, Bachelor's thesis, Master's thesis and any other degree paper undertaken during the course of studies, including the respective electronic versions.

Lecturers may also require a declaration of originality for other written papers compiled for their courses.

I hereby confirm that I am the sole author of the written work here enclosed and that I have compiled it in my own words. Parts excepted are corrections of form and content by the supervisor.

Title of work (in block letters):

De-anonymizing encrypted video streams

Authored by (in block letters):

For papers written by groups the names of all authors are required.

Name(s):	**First name(s):**
Stefano	Peverelli

With my signature I confirm that

- I have committed none of the forms of plagiarism described in the 'Citation etiquette' information sheet.
- I have documented all methods, data and processes truthfully.
- I have not manipulated any data.
- I have mentioned all persons who were significant facilitators of the work.

I am aware that the work may be screened electronically for plagiarism.
